## New 2006 Domestic Coverage with the Latest Codes, Live Data and Bi-Directional Tests for New Models and Systems

**7.2** It's here!  
Upgrade today.

› MODIS    › SOLUS    › SCANNER

Software Bundle 7.2: Top Reasons to Invest

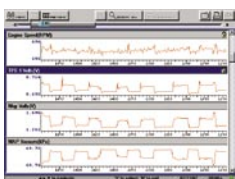

### › Previous 25 Vehicles

MODIS and SOLUS remember the Previous 25 Vehicles. Go right back to work, there is no need to re-ID the VIN. Whether it was Domestic, Asian, or European you have one list. Save steps and time every time you re-connect, whether you're going back to run more tests, follow the Troubleshooter or check pending codes after the repair. This is a real time saver.

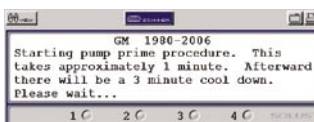

### › Make 2,000 Frame Movies on MODIS and SOLUS

For the first time, store up to 2,000 frames of graphed data for every data parameter in the list. Save to internal memory, CompactFlash, or a USB jump drive—yes, that's one more new feature in Bundle 7.2. This is the perfect way to record data during a test drive, save a history for every vehicle you diagnose and share with others.

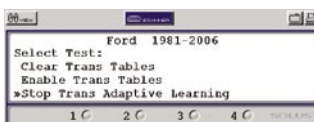

### › ABS Brake Bleeding

One of the popular new scan tool capabilities is brake bleeding. GM Bosch 5-3 ABS system brake bleeding is new for Bundle 7.2. Other Ford and GM ABS systems were introduced in previous releases. Technicians rely on these automated procedures... you just can't get all the air out of the lines without a scan tool.

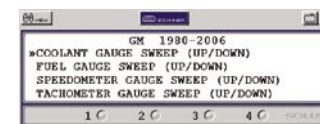

### › Adaptive Relearn & Reset Functions

Bundle 7.2 delivers many relearn features including adaptive reset functions on Ford, GM and Chrysler vehicles. This includes all new adaptation resets for popular GM and Ford transmissions, including the ability to stop use of, clear and enable the trans table. Performing these tests help save time before a repair and ensure a smooth drive out of the shop for the vehicle owner.

### › IPC Test

Bundle 7.2 includes new bi-directional tests for GM Instrument Panels. Take some of the mystery out of your diagnosis. Use the scan tool to command the gauges while you watch live data. These tests narrow the scope of your diagnostics, save time and confirm the repair, and are a great alternative to dropping the fuel tank!

### › OBD Health Check for MODIS and SOLUS

Bundle 7.2 introduces the Snap-on OBD Health Check. From the Main Menu, you are only a button press away from one easy to understand report that shows MIL status, current code count, and status of the readiness monitors. Print the report for your customers, and let them know a "no codes present" result is like having a thousand point inspection performed. This capability, like Global OBD, no longer requires the optional CAN adapter. Simply use the K-20 key included with MODIS and SOLUS upgrades.

### › Codes Overview

A good example of new vehicle technology is the "Codes Overview" report available for Chrysler vehicles that use CAN for their entire network. From the System Selection menu, choose this function to test all supported modules and report back the total number of codes present in each controller. Fast. Easy. And Powerful.

### › Advanced New Mercedes-Benz Coverage

Take advantage of all new coverage for 2003–2005 model year vehicles, plus new service reset functions and coverage of tire pressure monitoring systems. Bundle 7.2 upgrades the European coverage for all users with the optional European Software Activation Kit.
